Shape Theory: Categorical Methods of Approximation (Dover Books on Mathematics) J. M. Cordier, T. Porter

This in-depth treatment uses shape theory as a "case study" to illustrate situations common to many areas of mathematics, including the use of archetypal models as a basis for systems of approximations. It offers students a unified and consolidated presentation of extensive research from category theory, shape theory, and the study of topological algebras.

A short introduction to geometric shape explains specifics of the construction of the shape category and relates it to an abstract definition of shape theory. Upon returning to the geometric base, the text considers simplicial complexes and numerable covers, in addition to Morita's form of shape theory. Subsequent chapters explore Bénabou's theory of distributors, the theory of exact squares, Kan extensions, the notion of a stable object, and stability in an Abelian context. The text concludes with a brief description of derived functors of the limit functor theory—the concept that leads to movability and strong movability of systems—and illustrations of the equivalence of strong movability and stability in many contexts.

From reader reviews:

Matthew Williams:

Reading a publication can be one of a lot of exercise that everyone in the world adores. Do you like reading book so. There are a lot of reasons why people love it. First reading a book will give you a lot of new facts. When you read a book you will get new information mainly because book is one of various ways to share the information or even their idea. Second, studying a book will make a person more imaginative. When you looking at a book especially fictional book the author will bring that you imagine the story how the character types do it anything. Third, you may share your knowledge to other people. When you read this Shape Theory: Categorical Methods of Approximation (Dover Books on Mathematics), you can tells your family, friends in addition to soon about yours guide. Your knowledge can inspire the others, make them reading a guide.

Donna Bledsoe:

The book with title Shape Theory: Categorical Methods of Approximation (Dover Books on Mathematics) has lot of information that you can find out it. You can get a lot of profit after read this book. That book exist new know-how the information that exist in this guide represented the condition of the world now. That is important to yo7u to understand how the improvement of the world. This specific book will bring you inside new era of the glowbal growth. You can read the e-book with your smart phone, so you can read it anywhere you want.

Francisco Garcia:

You will get this Shape Theory: Categorical Methods of Approximation (Dover Books on Mathematics) by go to the bookstore or Mall. Just viewing or reviewing it may to be your solve difficulty if you get difficulties for your knowledge. Kinds of this reserve are various. Not only by means of written or printed but can you enjoy this book by means of e-book. In the modern era like now, you just looking because of your mobile phone and searching what their problem. Right now, choose your own personal ways to get more information about your e-book. It is most important to arrange you to ultimately make your knowledge are still upgrade. Let's try to choose correct ways for you.

Sharon Baker:

Reading a book make you to get more knowledge from that. You can take knowledge and information originating from a book. Book is created or printed or illustrated from each source this filled update of news. In this modern era like at this point, many ways to get information are available for anyone. From media social just like newspaper, magazines, science publication, encyclopedia, reference book, fresh and comic. You can add your knowledge by that book. Are you hip to spend your spare time to spread out your book? Or just in search of the Shape Theory: Categorical Methods of Approximation (Dover Books on Mathematics) when you necessary it?
