Hyperspectral Remote Sensing of Vegetation

Hyperspectral Remote Sensing of Vegetation

Hyperspectral narrow-band (or imaging spectroscopy) spectral data are fast emerging as practical solutions in modeling and mapping vegetation. Recent research has demonstrated the advances in and merit of hyperspectral data in a range of applications including quantifying agricultural crops, modeling forest canopy biochemical properties, detecting crop stress and disease, mapping leaf chlorophyll content as it influences crop production, identifying plants affected by contaminants such as arsenic, demonstrating sensitivity to plant nitrogen content, classifying vegetation species and type, characterizing wetlands, and mapping invasive species. The need for significant improvements in quantifying, modeling, and mapping plant chemical, physical, and water properties is more critical than ever before to reduce uncertainties in our understanding of the Earth and to better sustain it. There is also a need for a synthesis of the vast knowledge spread throughout the literature from more than 40 years of research.

Hyperspectral Remote Sensing of Vegetation integrates this knowledge, guiding readers to harness the capabilities of the most recent advances in applying hyperspectral remote sensing technology to the study of terrestrial vegetation. Taking a practical approach to a complex subject, the book demonstrates the experience, utility, methods and models used in studying vegetation using hyperspectral data. Written by leading experts, including pioneers in the field, each chapter presents specific applications, reviews existing state-of-the-art knowledge, highlights the advances made, and provides guidance for the appropriate use of hyperspectral data in the study of vegetation as well as its numerous applications, such as crop yield modeling, crop and vegetation biophysical and biochemical property characterization, and crop moisture assessment.

This comprehensive book brings together the best global expertise on hyperspectral remote sensing of agriculture, crop water use, plant species detection, vegetation classification, biophysical and biochemical modeling, crop productivity and water productivity mapping, and modeling. It provides the pertinent facts, synthesizing findings so that readers can get the correct picture on issues such as the best wavebands for their practical applications, methods of analysis using whole spectra, hyperspectral vegetation indices targeted to study specific biophysical and biochemical quantities, and methods for detecting parameters such as crop moisture variability, chlorophyll content, and stress levels. A collective "knowledge bank," it guides professionals to adopt the best practices for their own work.

From reader reviews:

Charles Jones:

Book is actually written, printed, or illustrated for everything. You can learn everything you want by a book. Book has a different type. As you may know that book is important thing to bring us around the world. Next to that you can your reading proficiency was fluently. A publication Hyperspectral Remote Sensing of Vegetation will make you to always be smarter. You can feel far more confidence if you can know about almost everything. But some of you think which open or reading a book make you bored. It isn't make you fun. Why they can be thought like that? Have you trying to find best book or acceptable book with you?

Richard Holeman:

Do you one among people who can't read gratifying if the sentence chained within the straightway, hold on guys this particular aren't like that. This Hyperspectral Remote Sensing of Vegetation book is readable through you who hate the straight word style. You will find the details here are arrange for enjoyable looking at experience without leaving also decrease the knowledge that want to provide to you. The writer of Hyperspectral Remote Sensing of Vegetation content conveys prospect easily to understand by lots of people. The printed and e-book are not different in the content material but it just different available as it. So , do you nonetheless thinking Hyperspectral Remote Sensing of Vegetation is not loveable to be your top checklist reading book?

Marilyn Vance:

Hey guys, do you desires to finds a new book to read? May be the book with the name Hyperspectral Remote Sensing of Vegetation suitable to you? Often the book was written by well known writer in this era. Typically the book untitled Hyperspectral Remote Sensing of Vegetation is the main of several books that everyone read now. That book was inspired lots of people in the world. When you read this reserve you will enter the new way of measuring that you ever know before. The author explained their concept in the simple way, and so all of people can easily to be aware of the core of this guide. This book will give you a wide range of information about this world now. In order to see the represented of the world on this book.

Roger Lee:

Do you like reading a e-book? Confuse to looking for your favorite book? Or your book has been rare? Why so many problem for the book? But just about any people feel that they enjoy to get reading. Some people likes reading, not only science book but novel and Hyperspectral Remote Sensing of Vegetation or perhaps others sources were given expertise for you. After you know how the good a book, you feel desire to read more and more. Science reserve was created for teacher or maybe students especially. Those textbooks are helping them to increase their knowledge. In some other case, beside science reserve, any other book likes Hyperspectral Remote Sensing of Vegetation to make your spare time far more colorful. Many types of book like this.
