Mathematics for Physicists (Dover Books on Physics)

Philippe Dennery, André Krzywicki

Mathematics for Physicists (Dover Books on Physics) Philippe Dennery, André Krzywicki

"A fine example of how to present 'classical' physical mathematics." — *American Scientist*

Written for advanced undergraduate and graduate students, this volume provides a thorough background in the mathematics needed to understand today's more advanced topics in physics and engineering. Without sacrificing rigor, the authors develop the theoretical material at length, in a highly readable, and, wherever possible, in an intuitive manner. Each abstract idea is accompanied by a very simple, concrete example, showing the student that the abstraction is merely a generalization from easily understood specific cases. The notation used is always that of physicists. The more specialized subjects, treated as simply as possible, appear in small print; thus, it is easy to omit them entirely or to assign them to the more ambitious student. Among the topics covered are the theory of analytic functions, linear vector spaces and linear operators, orthogonal expansions (including Fourier series and transforms), theory of distributions, ordinary and partial differential equations and special functions: series solutions, Green's functions, eigenvalue problems, integral representations.

"An outstandingly complete collection of mathematical material of wide application in physics . . . invaluable to the reader intent on increasing his knowledge of the mathematical theories and techniques underlying physics." — *Applied Optics*

From reader reviews:

Lanita Hill:

This book untitled Mathematics for Physicists (Dover Books on Physics) to be one of several books that will best seller in this year, honestly, that is because when you read this book you can get a lot of benefit into it. You will easily to buy this kind of book in the book retail outlet or you can order it via online. The publisher in this book sells the e-book too. It makes you more readily to read this book, because you can read this book in your Mobile phone. So there is no reason for you to past this guide from your list.

Cleveland Bolton:

Reading a guide can be one of a lot of exercise that everyone in the world likes. Do you like reading book consequently. There are a lot of reasons why people love it. First reading a reserve will give you a lot of new facts. When you read a reserve you will get new information due to the fact book is one of numerous ways to share the information or perhaps their idea. Second, studying a book will make you more imaginative. When you looking at a book especially fictional works book the author will bring that you imagine the story how the personas do it anything. Third, you are able to share your knowledge to other people. When you read this Mathematics for Physicists (Dover Books on Physics), you can tells your family, friends along with soon about yours e-book. Your knowledge can inspire others, make them reading a publication.

Barbara Baker:

Often the book Mathematics for Physicists (Dover Books on Physics) has a lot details on it. So when you read this book you can get a lot of advantage. The book was published by the very famous author. The author makes some research ahead of write this book. This book very easy to read you can obtain the point easily after scanning this book.

William Marsh:

Don't be worry for anyone who is afraid that this book will filled the space in your house, you can have it in e-book approach, more simple and reachable. This specific Mathematics for Physicists (Dover Books on Physics) can give you a lot of good friends because by you considering this one book you have thing that they don't and make you actually more like an interesting person. This particular book can be one of one step for you to get success. This publication offer you information that possibly your friend doesn't understand, by knowing more than some other make you to be great folks. So , why hesitate? Let me have Mathematics for Physicists (Dover Books on Physics).
