Information Technology and Business Process Reengineering: New Perspectives and Strategies Hui Liang Tsai

Information technology matters. The formulation of business models and strategies is likely to be seriously flawed if it neglects new technological changes and repercussions. Information technology and organizational learning are both critical to attaining and sustaining competitive advantage. Based on these premises, and on the increasingly evident obsolescence of the traditional, hierarchical business model, the author takes an integrated approach to the discussion of organizational learning, new value propositions, supply-chain optimization, e-commerce, new perspectives on business process reengineering, collaborative business models, globalization of business, and the continuing trend toward virtual integration.

This book is not another tired exhortation to take advantage of technology to improve corporate performance. One cannot utilize technology to its full potential without also overhauling the rigid, hierarchical business model that was designed for the command-and-control corporate environment of the industrial era. Tsai takes a comprehensive view of everything that needs to be done in order to make the most of emerging technologies. The new information economy calls for companies that foster strategic collaboration through a more horizontal organizational structure. A more synchronized supply chain yields better customer service, higher quality, faster delivery, and lower inventory. In the customer-centric environment, a new value proposition is essential. Business processes must be fast, focused, flexible, responsive, and nimble. With the knowledge gained from this book, one should be able to face the future with an ability and capacity to discern technology policies and make decisions concerning strategic positioning and competitive business strategy.
