Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering)

Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering)

Simulation based on mathematical models plays a major role in computer aided design of integrated circuits (ICs). Decreasing structure sizes, increasing packing densities and driving frequencies require the use of refined mathematical models, and to take into account secondary, parasitic effects. This leads to very high dimensional problems which nowadays require simulation times too large for the short time-to-market demands in industry. Modern Model Order Reduction (MOR) techniques present a way out of this dilemma in providing surrogate models which keep the main characteristics of the device while requiring a significantly lower simulation time than the full model.

With *Model Reduction for Circuit Simulation* we survey the state of the art in the challenging research field of MOR for ICs, and also address its future research directions. Special emphasis is taken on aspects stemming from miniturisations to the nano scale. Contributions cover complexity reduction using e.g., balanced truncation, Krylov-techniques or POD approaches. For semiconductor applications a focus is on generalising current techniques to differential-algebraic equations, on including design parameters, on preserving stability, and on including nonlinearity by means of piecewise linearisations along solution trajectories (TPWL) and interpolation techniques for nonlinear parts. Furthermore the influence of interconnects and power grids on the physical properties of the device is considered, and also top-down system design approaches in which detailed block descriptions are combined with behavioral models. Further topics consider MOR and the combination of approaches from optimisation and statistics, and the inclusion of PDE models with emphasis on MOR for the resulting partial differential algebraic systems. The methods which currently are being developed have also relevance in other application areas such as mechanical multibody systems, and systems arising in chemistry and to biology.

The current number of books in the area of MOR for ICs is very limited, so that this volume helps to fill a gap in providing the state of the art material, and to stimulate further research in this area of MOR. *Model Reduction for Circuit Simulation* also reflects and documents the vivid interaction between three active research projects in this area, namely the EU-Marie Curie Action ToK project O-MOORE-NICE (members in Belgium, The Netherlands and Germany), the EU-Marie Curie Action RTN-project COMSON (members in The Netherlands, Italy, Germany, and Romania), and the German federal project System reduction in nano-electronics (SyreNe).

From reader reviews:

Ann Fortune:

The book Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering) give you a sense of feeling enjoy for your spare time. You can use to make your capable a lot more increase. Book can for being your best friend when you getting strain or having big problem using your subject. If you can make examining a book Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering) to get your habit, you can get much more advantages, like add your own capable, increase your knowledge about many or all subjects. It is possible to know everything if you like open up and read a e-book Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering). Kinds of book are several. It means that, science publication or encyclopedia or other individuals. So , how do you think about this e-book?

Sarah McClain:

Your reading sixth sense will not betray anyone, why because this Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering) guide written by well-known writer whose to say well how to make book that may be understand by anyone who read the book. Written throughout good manner for you, dripping every ideas and writing skill only for eliminate your own personal hunger then you still uncertainty Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering) as good book but not only by the cover but also from the content. This is one publication that can break don't evaluate book by its cover, so do you still needing an additional sixth sense to pick this specific!? Oh come on your reading through sixth sense already told you so why you have to listening to a different sixth sense.

Sergio Terry:

Is it you actually who having spare time then spend it whole day through watching television programs or just lying down on the bed? Do you need something totally new? This Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering) can be the response, oh how comes? The new book you know. You are and so out of date, spending your time by reading in this new era is common not a geek activity. So what these textbooks have than the others?

Brenda Anderson:

What is your hobby? Have you heard that will question when you got college students? We believe that that issue was given by teacher for their students. Many kinds of hobby, Everyone has different hobby. Therefore you know that little person like reading or as looking at become their hobby. You should know that reading is very important and book as to be the issue. Book is important thing to incorporate you knowledge, except your teacher or lecturer. You will find good news or update about something by book. Different categories of books that can you choose to use be your object. One of them is actually Model Reduction for Circuit Simulation: 74 (Lecture Notes in Electrical Engineering).
