Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics)

Motoichi Ohtsu

Authored by the developer of dressed photon science and technology as well as nanophotonics, this book outlines concepts of the subject using a novel theoretical framework that differs from conventional wave optics. It provides a quantum theoretical description of optical near fields and related problems that puts matter excitation such as electronic and vibrational ones on an equal footing with photons. By this description, optical near fields are interpreted as quasi-particles and named dressed photons which carry the material excitation energy in a nanometric space.

The author then explores novel nanophotonic devices, fabrications, and energy conversion based on the theoretical picture of dressed photons. Further, this book looks at how the assembly of nanophotonic devices produces information and communication systems.

Dressed photon science and technology is on its way to revolutionizing various applications in devices, fabrications, and systems. Promoting further exploration in the field, this book presents physically intuitive concepts, theories, and technical details for students, engineers, and scientists engaged in research and development in dressed photon science and technology as well as nanophotonics.

From reader reviews:

Lucille Wood:

The book Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) can give more knowledge and information about everything you want. Exactly why must we leave a very important thing like a book Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics)? Some of you have a different opinion about reserve. But one aim that book can give many information for us. It is absolutely proper. Right now, try to closer using your book. Knowledge or facts that you take for that, you could give for each other; it is possible to share all of these. Book Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) has simple shape but the truth is know: it has great and big function for you. You can look the enormous world by wide open and read a publication. So it is very wonderful.

Michael Davis:

Book is to be different per grade. Book for children until adult are different content. As it is known to us that book is very important usually. The book Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) has been making you to know about other expertise and of course you can take more information. It is quite advantages for you. The publication Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) is not only giving you a lot more new information but also to be your friend when you really feel bored. You can spend your own spend time to read your book. Try to make relationship while using book Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics). You never truly feel lose out for everything should you read some books.

Jonathan Bean:

The guide with title Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) has a lot of information that you can find out it. You can get a lot of profit after read this book. This particular book exist new knowledge the information that exist in this book represented the condition of the world today. That is important to yo7u to be aware of how the improvement of the world. This book will bring you with new era of the internationalization. You can read the e-book with your smart phone, so you can read this anywhere you want.

Jacob Brown:

Are you kind of hectic person, only have 10 or 15 minute in your moment to upgrading your mind ability or thinking skill even analytical thinking? Then you have problem with the book as compared to can satisfy your short space of time to read it because all of this time you only find publication that need more time to be study. Dressed Photons: Concepts of Light-Matter Fusion Technology (Nano-Optics and Nanophotonics) can be your answer since it can be read by you actually who have those short spare time problems.
