Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series)

Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series)

Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 199.

Dynamics of the Earth's Radiation Belts and Inner Magnetosphere draws together current knowledge of the radiation belts prior to the launch of Radiation Belt Storm Probes (RPSP) and other imminent space missions, making this volume timely and unique. The volume will serve as a useful benchmark at this exciting and pivotal period in radiation belt research in advance of the new discoveries that the RPSP mission will surely bring. Highlights include the following: a review of the current state of the art of radiation belt science; a complete and up-to-date account of the wave-particle interactions that control the dynamical acceleration and loss processes of particles in the Earth's radiation belts and inner magnetosphere; a discussion emphasizing the importance of the cross-energy coupling of the particle populations of the radiation belts, ring current, and plasmasphere in controlling the dynamics of the inner magnetosphere; an outline of the design and operation of future satellite missions whose objectives are to discover the dominant physical processes that control the dynamics of the Earth's radiation belts and to advance our level of understanding of radiation belt dynamics ideally to the point of predictability; and an examination of the current state of knowledge of Earth's radiation belts from past and current spacecraft missions to the inner magnetosphere. *Dynamics of the Earth's Radiation Belts and Inner Magnetosphere* will be a useful reference work for the specialist researcher, the student, and the general reader. In addition, the volume could be used as a supplementary text in any graduate-level course in space physics in which radiation belt physics is featured.

From reader reviews:

Tommie Payton:

The book untitled Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series) contain a lot of information on this. The writer explains your ex idea with easy approach. The language is very simple to implement all the people, so do definitely not worry, you can easy to read that. The book was published by famous author. The author will take you in the new age of literary works. You can actually read this book because you can please read on your smart phone, or device, so you can read the book within anywhere and anytime. In a situation you wish to purchase the e-book, you can start their official web-site as well as order it. Have a nice go through.

Amelia Brown:

Is it you actually who having spare time subsequently spend it whole day by means of watching television programs or just telling lies on the bed? Do you need something totally new? This Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series) can be the reply, oh how comes? A book you know. You are and so out of date, spending your extra time by reading in this brand new era is common not a nerd activity. So what these ebooks have than the others?

Emma Englund:

As a student exactly feel bored for you to reading. If their teacher inquired them to go to the library in order to make summary for some e-book, they are complained. Just minor students that has reading's heart and soul or real their hobby. They just do what the educator want, like asked to the library. They go to presently there but nothing reading critically. Any students feel that looking at is not important, boring along with can't see colorful photos on there. Yeah, it is being complicated. Book is very important for you personally. As we know that on this age, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore this Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series) can make you experience more interested to read.

Neil Owens:

What is your hobby? Have you heard that will question when you got pupils? We believe that that issue was given by teacher to their students. Many kinds of hobby, Every person has different hobby. And you know that little person just like reading or as looking at become their hobby. You need to understand that reading is very important along with book as to be the point. Book is important thing to add you knowledge, except your own teacher or lecturer. You find good news or update in relation to something by book. Amount types of books that can you decide to try be your object. One of them is actually Dynamics of the Earth's Radiation Belts and Inner Magnetosphere (Geophysical Monograph Series).
